project uanon

Hack This Meme! 2022 CTF

Participation Guide

Registration

2022 is upon us and it's time for the Project Uanon CTF. To join the CTF you will need follow the steps in the FAQ page for creating an account.

The CTF consists of 6 challenges. The 6th and final challenge will be accessible to partipants only when they've completed all the previous challenges (levels 1 to 5).

When you're ready to begin, the CTF start page is located here.

Claiming Flags

To learn about Project Uanon console and graphical solving tools review the beginning tutorials. The console and graphical solvers allow you to submit answers for verification.

Answers with payload formats marked as flag have the format uanon{flag}.

While most challenges use the flag format, notable exceptions are challenges in the OSINT category wehere filenames or geo tagged data provide the solution.

First Bloods (~$10k in Prizes)

Participants who get first blood must use the graphical solver to submit their solution.

Each first blood in the CTF can claim a Tezos prize in $XTZ.

Prize amounts are proportional to estimated difficulty of the challenge. Overall estimated value, for all 6 prizes, is ~10k USD in $XTZ.

View a challenge's Points using the info command in the Project Uanon console. Point quantities are equivalent to $XTZ prize value for first blood.

Claiming a prize requires paying a transaction fee to the Tezos network (estimated to be between $0.04 and $0.10 USD in Tezos $XTZ).

Participants who get first blood but do not claim their prize, can still verify their answer, as well as compete in the other challenges; the $XTZ prize will remain available until it's claimed by a participant.

CTF Categories

- OSINT
- DATA FORENSICS
- CRYPTOGRAPHY
- MATH
- WEB
- REVERSE ENGINEERING

Isn't Project Uanon a Puzzle Game?

Participation in the main game and leaderboard is not required for CTF participation.
